

Power Plate Serial Number Location

Anti Slip Sticker Application

Removing old sticker:

Remove the old sticker working from the outer edges toward the center. It may come off in one piece or many small pieces.

Make sure to remove the entire sticker and see that there is no residue left on the platform. Mineral Spirits or a similar product can be used to remove any residual adhesive.

Make sure the platform surface is dry before applying the new sticker.

Applying new sticker:

Align the sticker with the strap holes at the front of the platform.

Roll back a portion of the paper backing and apply to platform as evenly as possible until

the sticker is fully applied. Use a soft bristle brush, like a back brush to press down and smooth out the sticker.

Push out all the air bubbles that may form. Break air bubbles with a pin or a knife if necessary.
